A Knowledge Discovery Approach to Urban Analysis: Beyoglu Preservation Area as a Data Mine Ahu Sokmenoglu Sohtorik
The overall aim of this book is the development of a knowledge discovery approach to urban analysis; a domain-specific adaptation of the generic process of knowledge discovery using data mining enabling the analyst to discover 'relational urban knowledge'. 'Relational urban knowledge' is a term employed in this thesis to refer to the potentially 'useful' and/or 'valuable' information patterns and relationships that can be discovered in urban databases by applying data mining algorithms. A knowledge discovery approach to urban analysis through data mining can help us to understand site-specific characteristics of urban environments in a more profound and useful way. On a more specific level, the thesis aims towards 'knowledge discovery' in traditional thematic maps published in 2008 by the Istanbul Metropolitan Municipality as a basis of the Master Plan for the Beyoglu Preservation Area.
